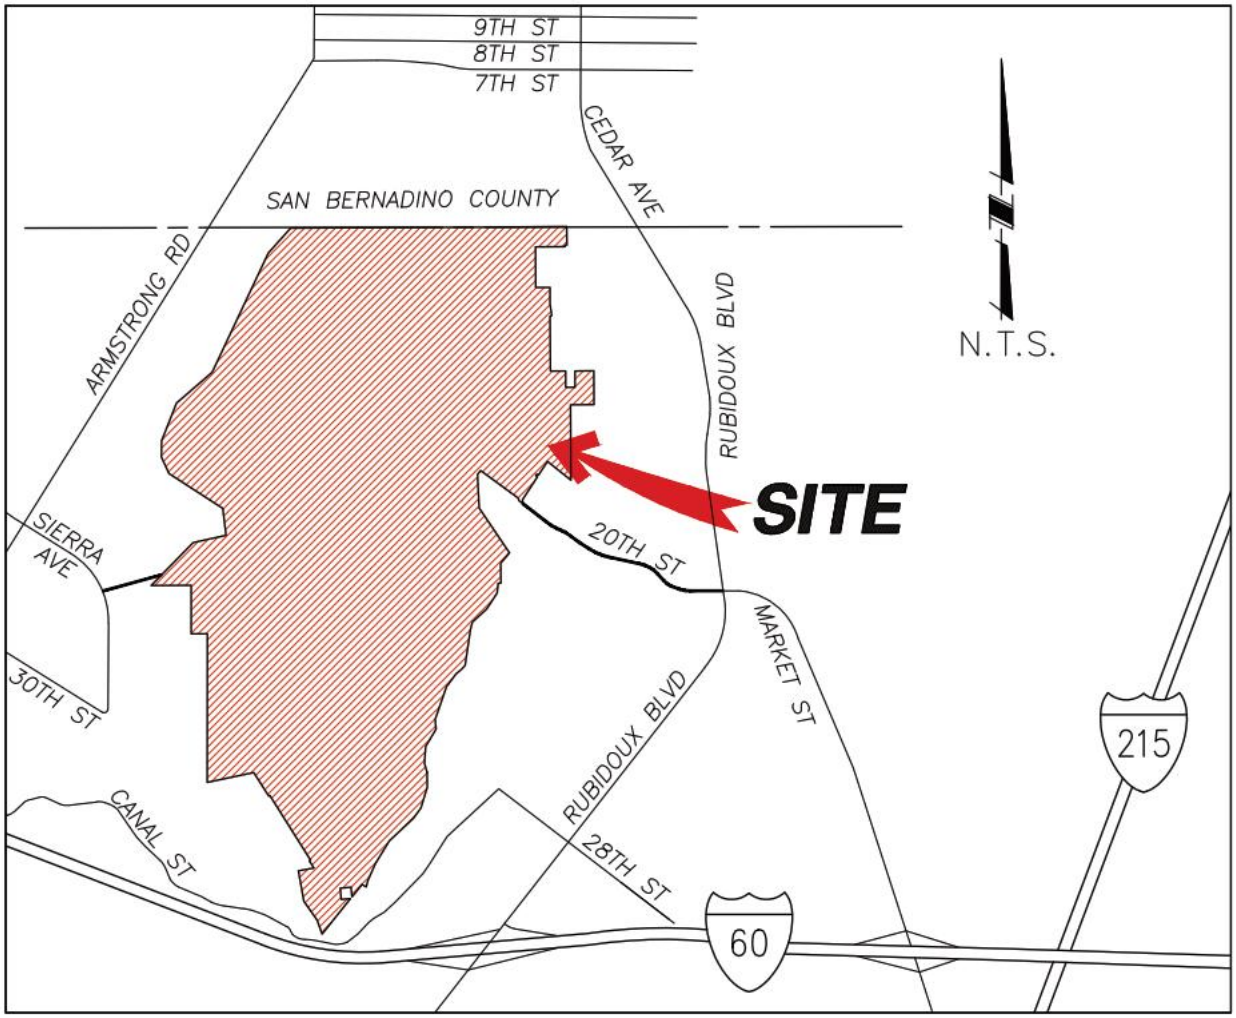
SECTION 1
INTRODUCTION

A. PROJECT LOCATION

The Rio Vista project (Project) is located in the City of Jurupa Valley, County of Riverside. The Project site is bounded by the Riverside/San Bernardino County line to the north, Armstrong Road to the west, Rubidoux Blvd. /Cedar Avenue to the East, and the SR-60 Freeway to the south. (See attached vicinity map, below).

B. VICINTIY MAP



C. BACKGROUND

The Rio Vista project (Tentative Tract Map 37074) subdivides approximately 917.3 acres into approximately 204.4 acres of Residential land use, approximately 58.3 acres of Light Industrial land use, approximately 82 acres of Business Park, approximately 43.4 acres of Public Facilities and Circulation, and approximately 529.2 acres of Natural Open Space, Parks and Trails**.**

D. STUDY PURPOSE

The purpose of this drainage study is to investigate and evaluate post-project impacts to downstream properties and existing drainage facilities, and to develop preliminary sizing of on-site drainage basins provide flood protection from 100-year frequency storm events.

The scope of this study is to:

a. Review available documentation to establish available capacity in the existing off-site downstream storm drain facilities to accept the amount of on-site runoff.
b. Evaluate the storm runoffs for 2, 10, and 100-year storm events for 1, 3, 6 and 24-hours durations for proposed conditions.
c. Determine preliminary sizing of detention basins needed to mitigate water quality, hydromodification impact, and increased runoff for 2, 10 and 100-year storm events for 1, 3, 6 and 24hrs durations.
d. Develop preliminary layout of the proposed storm drain conduits and catch basin inlets

E. DRAINAGE

The site lies along a ridge and its topography naturally drains in two directions. Storm flows generated in approximately 416 acres lying to the west of the ridge are tributary to the RCFC&WCD's Sunnyslope Channel, while storm flows generated in approximately 225.4 acres lying to the east of the ridge are tributary to the existing Belltown Market Street Storm Drain, *as shown in* ***Exhibit A***.

The proposed project will have five (5) points of connections (POCs) to existing downstream storm drains or watercourses; with, 4 POCs (POC#1, POC#2, POC#3 and POC#4) conveying flows from the westerly drainage area, and POC#5 conveying flows from the easterly drainage area. The proposed project will need to limit 100-year storm discharges to the POCs to less than the available capacities of the existing drainage facilities.

F. METHODOLOGY

The Drainage Study for this project was conducted as follows:

a. Rational Method hydrology was performed for existing and proposed condition. Proposed land use is based on ¼ and ½ acre lot for developed residential areas. Proposed land use for hillside was selected as open brush poor cover and for Light Industrial and Business Park was Commercial with 90% Imperviousness. Soils were based on soils map for Fontana and as attached in reference section.
b. Unit Hydrographs were performed as follows;
    - To meet County's Hydromodification criteria, existing and proposed condition unit hydrographs were compare for 2-year 24-hr storm, and outflows from all Detention Basins "A" to "I" was limited to 110 percent of the pre-project condition flows.
c. Basin Routing was performed to mitigate outflows from the proposed project site to meet the downstream constraints.

G. LAND USE AREAS

Land use for the proposed development are based on Rio Vista Specific Plan Land Use plan dated August 5, 2021 as shown in ***Exhibit B.***

[1] Dwelling Unit count by Planning Area is approximate and may vary from Planning Area to Planning Area and may increase or decrease by up to 10% provided that the overall Dwelling Units in Rio Vista do not exceed the Target Dwelling Unit Count of 1,697. The target density of each Planning Area may increase or decrease provided that the target density remains below the maximum density of the Land Use Designation.

[2] The School Site in Planning Area (PA) 18 may be developed with a Medium Density Residential use at a maximum of 56 DUs, if the School District does not purchase school site by the buildout of the 800th residential unit (Section II.A.1.C.). In response to market demands, non-residential uses (mixed use, office, commercial, religious) may be developed in PA 18 subject to a Conditional Use Permit. The alterntative 56 Dwelling Units are not included in the 'Project Totals'.

[3] Park acreage is approximate and may be larger or smaller in size provided that the overall park acreage in Rio Vista meets or exceeds City of Jurupa Valley park requirements of 3-acres per 1,000 population.

[4] Open Space-Conservation includes natural areas, common areas, landscaped slopes, conservation areas, and Southern California Edison easement.

[5] All Planning Area access points shown are conceptual only.

[6] Acreage is approximate - exact acreage will be defined through future implementing tract map(s).

H. EXISTING FACILITIES

There are no drainage improvements within the project area. A series of natural watercourses convey storm flows from the project site to the existing termini of existing off-site storm drains tributary to Sunnyslope Channel and to Market Street Storm Drain, as shown in ***Exhibit C.***

I. PROPOSED FACILITIES

The proposed storm drain infrastructure will include a total of twelve (12) drainage basins (detention basins, debris basins and water quality basins) designed to mitigate to address storm runoff flow rates, water treatment and hydromodification requirements for the Project. Drainage areas tributary to each drainage basin are shown in ***Exhibit D***.

Preliminary layout of proposed storm drains, drainage basins, tributary drainage areas, and POCs are shown in ***Exhibit E.*** Drainage areas tributary to each basin, and peak flows tributary to each POC under post-project conditions are summarized below:

- ***Drainage areas A to POC#1.***

  Under existing conditions Drainage Area "A" is approximately of 53.70 acres, comprised of 33.6 acres of onsite and 17.9 acres of off-site areas, generating flows of approximately 169.0 cfs during 100-year storms. Flows from this area are tributary to a natural watercourse as it exits the project site. During post-project conditions this areas will decrease to 51.5 acres and generate 100-year storm flows of approximately 146.9 cfs. Drainage area A is routed through a proposed Basin A, with a peak outflow of 139.8 cfs draining to the natural watercourse at POC#1.

- ***Drainage Areas B, C and D To POC#2 &3***

  All the area included in Drainage Areas "B", "C" and "D" will drain to Basins B, C and D for detention and treatment. Flows from areas that are left to its natural state (open space) will bypass the basins. Post-project flows at Exit Node 17 *(See Proposed hydrology map)* is approximately 350.1 cfs for 100-year storm. Flows will be conveyed by proposed storm drain pipe to existing off-site 54" and 36" storm drains at POC#2 and POC#3. As-built design capacities of existing storm drain conduits at these two POCs are 305 cfs and 55.9 cfs, respectively.

- ***Drainage Areas E to POC#4.***

  Under existing condition, drainage area "E" is approximately of 93.70 acres, and generates flows of approximately 253.2 cfs. During proposed condition this area will increase to approximately 96.4 acres and generate flows of approximately 289.8 cfs. The allowable as-built design capacity in the existing 54" RCP at POC#4 is 247.0 cfs for 100-year storm. The proposed detention and water quality Basin E, will reduce the outflow to approximately 221.9cfs.

- ***Drainage Areas H and Offsite study to POC#5***

  A preliminary drainage study of off-site area (d/s of the Project) tributary to POC#5 was performed as shown in ***Exhibit F***. Under proposed conditions total un-detained 100-year storm flows exiting the Project (Node 508) is approximately 556.2 cfs, and at POC#5 (Node 510) is approximately 1,028.4 cfs. Since the total allowable flow at POC#5 is 604 cfs, storm flows from drainage area H will go through numbers of detention basins in series (Basins F, G, H, I & J) before connecting to the existing 84" RCP storm drain at intersection of Avalon Street and 20TH Street (Node 510). The resulting detained flows will be reduced to approximately 580 cfs.

Detention basins for proposed site are a key component in storm water mitigation and site BMPs. Peak flow rates generated in all the Drainage Areas for un-detained and detained conditions are summarized in Table 1 & Table 2.

Debris Production Calculations

The U.S. Army Corps of Engineers, Los Angeles District Debris Method was selected to determine the sediment yield for the study watershed. See Table.3 and Basin volumes Tables 4 and 5

J. CONCLUSION

The proposed storm drain facilities will mitigate post-development flows to meet the as-built capacities of the existing downstream storm drain facilities.

The proposed basins will also mitigate water quality impact, and County's Hydromodification criteria by limiting post-project discharge from the proposed site to no more than 110 percent of the pre-project flows for 2-year, 24-hours storm events.

Note:

Orifice outflow is based on:

1. $Q=CA(2gH)^{0.5}$
   where:
   C = Coefficient, 0.6 used here
   A = Orifice Area
   H = Headwater

Weir flow is based on:

2. $Q=CLH^{1.5}$
   where:
   C = Coefficient, 2.8 used here
   L = Weir Length, Grate Perimeter was used here
   H = Headwater

15'X10' Outlet is designed to convey 100-year peak flow rate.

User entry of depth-outflow-storage data

Total number of inflow hydrograph intervals = 38
Hydrograph time unit = 5.000 (Min.)
Initial depth in storage basin = 0.00(Ft.)

Initial basin depth = 0.00 (Ft.)
Initial basin storage = 0.00 (Ac.Ft)
Initial basin outflow = 0.00 (CFS)

Note:

Orifice outflow is based on:

1. $Q=CA(2gH)^{0.5}$
   where:
   C = Coefficient, 0.6 used here
   A = Orifice Area
   H = Headwater

Weir flow is based on:

2. $Q=CLH^{1.5}$
   where:
   C = Coefficient, 3.33 used here
   L = Weir Length, Grate Perimeter was used here
   H = Headwater
